

MyKey® Restrictions on Vehicle Operation

Principles of Operation

The MyKey® feature allows a restricted driving mode to be programmed into one (or more) key(s) supplied with the vehicle or into any (Passive Anti-Theft System (PATS)) programmed spare key(s) to promote good driving habits. The MyKey® is a restricted key for all consecutive key cycles until the MyKey® restricted key is cleared. The remaining key(s) is referred to as an administrator key(s) or admin key(s). There must always be at least one admin key. The Body Control Module (BCM) does not allow the last administrator key to be programmed as a MyKey® restricted key. Both the admin key and the MyKey® can be used to see how many admin keys and MyKey® restricted keys are programmed to the vehicle, and how many total miles have been driven with the MyKey® active.

When the MyKey® feature is programmed, several features are modified for the MyKey® driver only.

Inspection and Verification

1. Verify the customer concern.
2. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
3. If the cause is not visually evident, verify the symptom. GO to [Symptom Chart](#).

Symptom Chart

Symptom Chart		
Condition	Possible Causes	Action
• No known admin key available	• The admin key is lost/stolen • Aftermarket remote start system has been programmed as the admin MyKey®	• PURCHASE a new key and PROGRAM it to the Passive Anti-Theft System (PATS) . REFER to Key Programming Using Diagnostic Equipment in this section. • REFER to MyKey® Programming in this section to clear all programmed MyKey®. PROGRAM the aftermarket remote start system as a MyKey®.
• No MyKey® messages available	• Unlimited key mode is enabled	• INFORM the customer of the normal vehicle operation. If the customer desires MyKey® to be enabled, DISABLE the unlimited key mode. REFER to Key Programming — Unlimited Key Mode in this section.
• MyKey® acts as an admin key	• Aftermarket remote start system was used to start the vehicle	• REFER to MyKey® Programming in this section to clear all programmed MyKey®. PROGRAM the aftermarket remote start system as a MyKey®.

• Cannot locate the MyKey® restricted key	• The MyKey® restricted key is lost/stolen	• PURCHASE a new key and PROGRAM it to PATS . REFER to Key Programming Using Diagnostic Equipment or Key Programming — Program a Key Using Two Programmed Keys in this section. PROGRAM the new key to the MyKey® restricted key status. REFER to MyKey® Programming in this section.
• All keys have been programmed to a MyKey® restricted key status	• Aftermarket remote start system has been programmed as the admin MyKey®	• REFER to MyKey® Programming in this section to clear all programmed MyKey®. PROGRAM the aftermarket remote start system as a MyKey®.
• Total number of admin keys and MyKey® programmed includes one more key than customer has	• An unauthorized key has been programmed to the vehicle as a MyKey® restricted key or as an admin key • The vehicle has an aftermarket remote start system	• ERASE all keys and PROGRAM all of the customer's keys. REFER to Key Programming Using Diagnostic Equipment in this section. If necessary, PROGRAM the desired key to a MyKey® restricted key status. REFER to MyKey® Programming in this section. • INFORM the customer of the normal vehicle operation. RELEASE the vehicle to the customer. If necessary, REFER to Clear MyKey® Restricted Features in this section to clear all programmed MyKey®. This action also clears any MyKey® restrictions the remote start system may have.
• The MyKey® distance does not accumulate	• The MyKey® is not being used by the intended driver • The MyKey® system has recently been cleared	• MAKE SURE the key being used is a MyKey® restricted key by observing the message center messages when the vehicle is started using the MyKey®. VERIFY the MyKey® restricted key is being used by driving the vehicle using the MyKey® restricted key and checking the miles accumulated before and after the drive.
• Cannot create a MyKey®	• Engine was started using an aftermarket remote start system that is programmed as a MyKey® restricted key • MyKey® restricted key is already in the ignition lock cylinder • Unlimited key mode is enabled	• REFER to MyKey® Programming in this section for the programming procedures. • INFORM the customer of the normal vehicle operation. If the customer desires MyKey® to be enabled, DISABLE the unlimited key mode. REFER to Key

	• Key in the ignition lock cylinder is the only one admin key left	Programming — Unlimited Key Mode in this section. • INFORM the customer of the normal vehicle operation. There must always be one admin key.
• Cannot configure/clear the MyKey® feature	• MyKey® restricted key in the ignition lock cylinder • Engine was started using an aftermarket remote start system that is programmed as a MyKey® restricted key • No MyKey® restricted keys are programmed	• INFORM the customer of the normal vehicle operation. An admin key must be used to configure or clear MyKey®. • PROGRAM MyKey®. REFER to MyKey® Programming in this section for the programming procedures.
