

Universal Transmitter

Functional Components

The only functional component of the universal transmitter system is the universal transmitter, which is part of the LH sun visor.

System Operation

The universal transmitter provides a convenient way to substitute up to 3 hand-held transmitters with a single built-in device. The universal transmitter can learn the radio frequency codes of most current transmitters. The universal transmitter:

- operates garage doors, gates and home/office lighting and security systems.
- learns and transmits the radio frequency of up to 3 hand-held transmitters from any of the systems mentioned above.
- is powered by the vehicle battery and charging system.
